

BENJAMIN MOWER

Santa Monica, CA | benjaminmower@gmail.com | github.com/benjaminmower | linkedin.com/in/benjaminmower

Program and product lead who ships AI systems into real operations, measures them against deterministic baselines before they get authority, and trains people until they run them without him. Seventeen years of high-consequence delivery across construction, streaming, and film production. Trusted across every seat at the table: client, director, and producer on set; legal, HR, content strategy, marketing, and publicity at Paramount+; homeowner, architect, engineer, and city inspector in construction.

AI SYSTEMS AND AGENT IMPLEMENTATION

Superintend · Schedule Risk Detection · 2026 – Present · github.com/benjaminmower/superintend

- Risk flags live inside the weekly Google Sheet my Palisades projects already run on: 280 items, 51 subcontractors, 39 weekly tabs, with a next action per flag.
- Zero adoption cost as a hard requirement: the sheet stays the only interface, writes are allow-listed to owned columns, and rollout is reversible.
- Source-agnostic TrackerSource interface with capability flags, so a CSV export or Procore integration degrades gracefully.
- Deterministic Python rules backtested against roughly 3,100 real recorded edits on precision, recall, and lead time against three published baselines, with success criteria frozen in advance. The agent layer ships only if it beats the rules,, off by default otherwise.

Flypost · Founder & Product Lead · 2022 – 2026

- Built the platform alone in three months with Claude Code after being told it would take a team of engineers six, deployed it to Compass Los Angeles, and trained a Compass agent on it. Node on Cloud Run, Firestore, versioned JSON schema (v4) with canonical identity and provenance, published OpenAPI spec and read-only MCP manifest.
- Ingestion agent: Claude Sonnet in a tool-use loop over eleven tools, loop state tracked outside the context window, token, time, and source budgets, and separate decision and proof logs.
- Web Concierge: embeddable chat widget configured per brokerage (Compass, BHHS Utah, Vista Sotheby's) where GPT-4o-mini answered only from live results retrieved through tool calls, with verified data and disclosed area context in separate fields, SSE streaming with fallback, security-review fixes, and a feature flag isolating it from production.
- Built six GPT agents for three brokerages with a trust split: a staff agent that edits, a customer agent that only reads. Regression tests guard against hallucination and model overrides of server-owned fields.
- Stopped the roadmap when Compass AI and Redfin AI shipped network-wide, pivoted to presence verification, proved it with a design partner, and shut it down on user incentives rather than technology.

Class Management Platform · 2024 – Present · Sendiment · 2026 – Present · HireNear · 2025 – 2026, paused

- Class management: live system for a real business handling children's personal and medical data, with two-layer authorization, 21 migrations, versioned consent, and PCI minimization; caught an authorization rule enforced in the frontend but not the API.
- Sendiment: live remote MCP server on Cloudflare Workers and D1 with a versioned manifest, listed in the official MCP Registry; agent posts render distinct from human ones, rate-limited through a salted, rotating IP hash.
- HireNear: agent handles discovery and fit scoring while the person owns every outreach decision; 80% fit gate, one batched Claude call per run, 30-day retention, no form submission, no raw page storage.

PROGRAM DELIVERY

Elcano Construction, Palisades Fire Reconstruction · Professional Services Program Manager · 2025 – Present

- Own scope, schedule, risk, and sequencing on two multi-million dollar programs across trades, architects, engineers, inspectors, insurers, and homeowners, none of whom report to me. Prevented an estimated seven-week delay by catching omissions before execution.
- Revived the stalled Bishop residence, with no owner and no documented dependencies across consultants, LADBS, engineers, lawyers, and insurers, by mapping the critical path and setting named owners with dated commitments.

Paramount+ · Technical Producer, Cross-Functional Program Manager · 2022 – 2024

- Supported a small team responsible for tens of thousands of assets a year, 60+ subcontractors across multiple states, and 200 productions on two Burbank sound stages, within a \$3M portfolio.

- Documented where chain of custody leaked and where milestones had no automation or triggers, got leadership approval, and consolidated three tools into one with automated triggers and reporting: errors to essentially zero, six-plus hours of daily supervision down to 30 to 45 minutes of setup.
- Designed and operated the tracking system underneath it: dependency logic, workflow automations, and reporting views that became the department's single source of truth, plus the playbooks it standardized on.
- The obstacle was familiarity, not the business case, so I taught fundamentals until a resistant team ran it on its own; the system outlived the org chart that commissioned it.

EARLIER EXPERIENCE

- **Film & Media, Netflix, Amazon, Warner Bros. Discovery · Digital Image Technician & Solutions Architect · 2013 – 2025:** scoped each shoot's complications and solved them live under zero-failure conditions; chain of custody in Silverstack Lab, review through Frame.io; remote servers and local AV networks on set.
- **Apple Inc. · Technical Educator & Team Lead · 2008 – 2014:** thousands of technical workshops; onboarding curriculum other trainers delivered without me.

SKILLS

AI systems: agent harness and tool-registry design, tool-calling retrieval and grounding, evals and backtesting, human-in-the-loop design, allow-listed writes, MCP servers, Claude Code and Codex daily.

Technical: Python and pytest, JavaScript and TypeScript, Node, REST APIs, OpenAPI, Google Cloud (Cloud Run, IAM, Firestore, Cloud Build), Cloudflare Workers and D1, SSE, GitHub CI/CD.

Platforms and domain: Webflow, Adobe Creative Cloud, Canva, Frame.io, Silverstack Lab, Airtable, Asana, Linear; LADBS plan check, Title 24, trade sequencing.

EDUCATION AND CERTIFICATIONS

University of Utah, Bachelor of Music, Jazz Composition · Apple Certified Support Professional · Certified ScrumMaster (in progress) · OSHA 30-Hour (in progress)
