# BENJAMIN MOWER

Santa Monica, CA | benjaminmower@gmail.com | benjaminmower.github.io/portfolio | linkedin.com/in/benjaminmower | github.com/benjaminmower

## SUMMARY

Entertainment technologist and creator who designs production pipelines from pre-production through post and VFX, directs and executive produces, and builds AI agents. Technical authority on Netflix, Amazon, and Warner Bros. Discovery productions. Built a production system at Paramount+ that took daily processing from six hours to 30 to 45 minutes. Built an AI platform alone in three months with Claude Code and took a brokerage client from first pitch through go-live and training. Trusted across every seat at the table: client, director, and producer on set; legal, HR, marketing, and publicity at Paramount+; homeowner, architect, engineer, and city inspector in construction.

## PRODUCTION PIPELINES AND CREATIVE TECHNOLOGY

**Entertainment Technologist and Creator · 2013 – 2026** | Netflix, Amazon, Warner Bros. Discovery, commercial campaigns

- Technical authority on set for productions and campaigns including Netflix Tudum, Tommy Hilfiger, DKNY featuring Hailey Bieber, Amazon Essentials, NARS (2025 and 2026), and Riot Games RiotNow.
- Designed the data workflow from pre-production through production to post and VFX.
- Kept chain of custody and audit-ready logging for footage that cannot be reshot.
- Ran the equivalent of a steering committee on every production: translated constraints into executive decisions for directors, producers, and clients in seconds while giving IT and post specific direction.
- Tools: Silverstack Lab, Premiere Pro, Frame.io, DaVinci Resolve, Canva.

**Paramount+ · 2022 – 2024** | Technical Producer, Creative Content

- Ran project management for the team shooting promo materials (trailers, key art, photography) and operations for hundreds of productions a year, including simultaneous live-to-tape broadcasts across multiple countries.
- Audited before proposing. Found assets losing chain of custody at handoffs across three tools with missing triggers, built the business case around the failure mode, and got leadership approval.
- Built and personally operated a production Airtable system: base architecture, dependency logic, workflow automations, reporting views. Replaced three tools with one, with automated milestone triggers.
- Daily processing went from 6 hours to 30 to 45 minutes, error margin to effectively zero, throughput tripled, no added headcount. Scope: tens of thousands of assets a year, 60+ subcontractors, 200 productions on two Burbank stages, a $3M portfolio.
- Owned the people workflow for 60+ subcontractors, including onboarding them into Entertainment Partners for payment processing. Wrote the playbooks the department standardized on and ran fundamentals workshops until a resistant team ran the system without me.

## DIRECTING, PRODUCING AND ORIGINAL FORMATS

- Director and executive producer on I Hope My Ex Doesn't See This (2020) and Dark White (2020). Credits at imdb.com/name/nm6156422.
- Writer and creator credits on For Art's Sake and Prize or Punishment. Shot format demos for the game shows 100 for 100 (with Morgan Jay) and The College Try (with Brent Pella), and an art tutorial with Alyce Marie.
- Pitched original formats to development executives, major production companies, and top agencies, and built the decks and keynotes.

## AI AGENTS AND CREATIVE TOOLS

**Flypost · 2022 – 2026** | Founder and Product Lead

- Told a team of engineers would need six months to reach MVP, built it alone in three using Claude Code. Took the Compass Los Angeles engagement from first pitch through technical discovery, go-live, and executive and agent training.
- Built six GPT agents for three brokerages and deployed and trained with one: staff agents edit, customer agents read only, with verified data stated as fact and model knowledge carrying a disclosure marker. Published OpenAPI and a versioned MCP manifest.
- Ingestion agent on Claude Sonnet with three stop conditions and a decision log kept separate from the proof log. Killed the per-brokerage roadmap when Redfin and Compass AI shipped network-wide, then shut the product down when the pivot died on user incentives.

**HireNear, Sendiment, Table Read · 2025 – 2026**

- HireNear: an agent that finds and scores local hiring signals while the person decides, with prompt-injection defense, per-provider budgets, and a non-LLM fallback. Sendiment: a deployed remote MCP server on Cloudflare Workers, listed in the official MCP Registry.

- Table Read: screenplay read-aloud tool with automatic per-character voice casting, a local neural text-to-speech server (Kokoro) that falls back to browser voices, and an offline audiobook CLI.
- Claude Code and Codex in the terminal daily. Superintend: a Python agent running live on a production Google Sheets construction tracker.

## CLIENT-FACING DELIVERY

**Elcano Construction, Palisades Fire Reconstruction · 2025 – Present** | Professional Services Program Manager

- Run delivery on two simultaneous multi-million dollar rebuilds with trades, architects, engineers, LADBS inspectors, insurers, and homeowners, none of whom report to me. Every requested change is priced against schedule before approval.
- Read the plans against the window order before it was placed and caught three clerestory windows missing from the schedule. Avoided seven weeks of lead time and $18,000.

**Alyce's Art Studio · 2017 – Present** | Web platform and class management system (client relationship)

- Moved the studio to Webflow in 2017, built a COVID e-commerce storefront on a compressed timeline, and have run the web presence for eight-plus years. Built a class management platform in beta (Stripe checkout end to end on test data; not cut over).

## EARLIER EXPERIENCE

- **Making Sense podcast (Sam and Annaka Harris), 2024 – 2025:** studio operations and live production, post-production asset management, and guest coordination while scaling the show from audio to video. Helped Jason Osborne build the studio. ClickUp, Riverside.fm, Frame.io.
- **Technical Educator and Team Lead, Apple, 2008 – 2014:** thousands of workshops from first-time users to enterprise IT, plus onboarding curriculum that others delivered.

## SKILLS

**Creative production:** on-set data and color workflow, chain of custody, Silverstack Lab, Premiere Pro, DaVinci Resolve, Frame.io, Canva, Adobe Creative Cloud, Figma, Webflow. **Workflow design:** pipeline audits, change control, risk registers, executive reporting, vendor onboarding, adoption and training. **AI and build:** AI agent design, human-in-the-loop patterns, MCP and OpenAPI contracts, JavaScript and TypeScript, Python, Cloudflare Workers, GCP, Airtable.

## EDUCATION AND CERTIFICATIONS

University of Utah, Bachelor of Music, Jazz Composition, 2010. Apple Certified Support Professional. Certified ScrumMaster (in progress). OSHA 30-Hour (in progress).
